THE CLAIMS

10

- 1. An apparatus for applying treatment fluids to the human body comprising:
 - a first fluid impervious layer; and
- 5 a treatment fluid dispensing layer secured to and overlying the fluid impervious layer;

the treatment fluid dispensing layer comprising a finely woven fabric which normally retains the treatment fluid and which dispenses the treatment fluid in response to pressure and/or body temperature.

- 2. The treatment fluid dispensing apparatus according to claim 1 having the configuration of the human torso, arms, and legs.
- 3. The treatment fluid dispensing apparatus according to claim 2 further comprising lower leg components, and upper leg/lower torso component, and upper torso component, and arm components and wherein the components comprising the treatment fluid dispensing apparatus are interconnected by fasteners.

- 4. The treatment fluid dispensing apparatus according to claim 3 wherein the fasteners are selected from the group consisting of hook-and-loop type fasteners, snaps, buttons, and zippers.
- 5. The treatment fluid dispensing apparatus according to claim 1 wherein the treatment fluid dispensing layer comprises a plurality of configurations each aligned with a predetermined section of the human body.
- 6. The treatment fluid dispensing apparatus according to claim 5 wherein at least one of the configurations comprising the treatment fluid dispensing layer includes spaced, parallel transversely extending sections.
- 7. The treatment fluid dispensing apparatus

 15 according to claim 5 wherein at least one of the configurations comprising the treatment fluid dispensing layer includes spaced, parallel longitudinally extending sections.

8. The treatment fluid dispensing apparatus according to claim 5 wherein at least one of the configurations comprising the treatment fluid dispensing layer includes spaced, parallel angularly extending sections.

5

- 9. The treatment fluid dispensing apparatus according to claim 5 wherein at least one of the configurations comprising the treatment fluid dispensing layer includes checkerboard pattern sections.
- 10. The treatment fluid dispensing apparatus according to claim 5 wherein at least one of the configurations comprising the treatment fluid dispensing layer includes a very find mesh configuration.
- 11. The treatment fluid dispensing apparatus

 15 according to claim 1 wherein the treatment fluid dispensing

 layer comprises a generally open configuration which is

 secured to the underlying fluid impervious layer by a

 plurality of connection points.

- 12. An apparatus for applying treatment fluids to the human body comprising:
 - a first fluid impervious layer; and
- a treatment fluid dispensing layer secured to and overlying the fluid impervious layer;

5

the treatment fluid dispensing layer comprising a finely woven fabric which normally retains the treatment fluid and which dispenses the treatment fluid in response to pressure and/or body temperature;

treatment fluid dispensing apparatus having the configuration of the human torso, arms, and legs, and comprising a plurality of configurations each aligned with a predetermined section of the human body.
